Education

Indian Institute of Information Technology (IIIT), Kota	2021 – 2025
B.Tech in Electronics and Communication Engineering (ECE)	CGPA: 8.00

Skills

- **Languages:** Java, Golang, C#, SQL, Python, JavaScript, C++
- **Backend & Architecture:** Spring Boot, .NET 10, Microservices, RESTful APIs, Dependency Injection, OpenAPI
- **Databases & Caching:** Microsoft SQL Server, MongoDB, Redis, Dapper ORM
- **Cloud, DevOps & Security:** Docker, Kubernetes, Azure, Azure DevOps CI/CD, Git, HashiCorp Vault, Kerberos, RBAC
- **Testing & Observability:** Playwright, Jest, ELK Stack (Elasticsearch, Logstash, Kibana), Filebeat, Distributed Tracing

Work Experience

NAV Fund Services (Fintech) Software Development Engineer	Jan 2025 – Present
<i>Golang, C#, .NET 10, Java, Docker, Kubernetes, SQL Server, Redis, ELK Stack, HashiCorp Vault</i>	

- Led modernization of legacy monolithic services into scalable **RESTful microservices**, maintaining full backward compatibility for **62+ hedge fund clients** across 484+ configurations, boosting throughput by **4.5×**.
- Engineered an enterprise authentication platform in **Golang** implementing Kerberos SPNEGO SSO, TOTP multi-factor authentication, and **HashiCorp Vault** dynamic secret rotation to centralize distributed access.
- Containerized backend services using multi-stage Docker builds and deployed to high-availability **Kubernetes** clusters with rolling updates, autoscaling, and enterprise Kerberos verification.
- Engineered production observability with the **ELK stack** and correlation-based distributed tracing; implemented dual-channel alerting with cache-based rate limiting for the Elsa 3 workflow engine.
- Automated enterprise user provisioning via **Azure Active Directory** (Microsoft Graph APIs); expanded **RBAC** approval workflows in .NET and SQL Server, and established test suites across **Jest** and **Playwright** in CI/CD.

Gap Inc. Software Development Intern	July 2024 – Aug 2024
<i>Java, Spring Boot, Azure Data Factory, REST APIs</i>	

- Developed RESTful APIs using **Java Spring Boot**, built cloud ETL pipelines with **Azure Data Factory**, and delivered backend services following Agile software practices.

Projects

Algorithmic Trading Platform	2024
<i>Python, Django, React, WebSockets, Pandas, NumPy</i>	

- Engineered a fully automated equity trading platform with low-latency **WebSocket** streaming, broker API integration, and a **Django** backend for real-time technical analysis and automated order routing.
- Optimized trade execution using a multithreaded backtesting engine; validated across 1 year of historical market data achieving **69.02% CAGR** with **0.85 win rate**; built a live React dashboard for performance monitoring.

Webhook Delivery Engine	2025
<i>Golang, Redis, PostgreSQL, Docker, HMAC-SHA256, REST APIs</i>	

- Engineered a resilient asynchronous webhook delivery microservice in **Golang** dispatching real-time notifications to subscriber endpoints, processing **10,000+ events/min**.
- Implemented **HMAC-SHA256** signature verification for payload security, exponential backoff retries with jitter, and a **Dead-Letter Queue (DLQ)** for handling transient recipient outages.
- Built a concurrent worker pool with **Redis** priority queues, PostgreSQL audit logging, and health/latency monitoring.

Achievements

- **Codeforces Expert:** Max rating **1862**, global rank **46** in Round 941.
- **LeetCode Knight:** Max rating **1854**, top 5%, rank **520**; solved **800+** problems across competitive platforms.
- Delivered end-to-end fintech migration over **7 months**, from architecture through Kubernetes deployment with **zero production incidents**.
